

AMEH MATTHEW OCHE

People Operations & AI Systems · HR Workflow Automation

Kaduna, Nigeria · amoche42@gmail.com · [linkedin.com/in/am-oche](https://www.linkedin.com/in/am-oche) · [Portfolio](#)

PROFESSIONAL SUMMARY

People Operations professional who builds the workflows, automations, and AI-enabled tools that scale modern HR. Promoted to Analyst, People & Culture at Babban Gona within 12 months of joining HR, on the strength of shipping four production systems: a psychometric and cognitive assessment platform for recruitment, a real-time AI behavioural interview platform, a secure organization-wide learning and assessment platform, and an automated approval workflow that has processed 480+ requests with zero operational errors. Formally certified in AI Fluency by Anthropic. MBA in Leadership and Management. Comfortable working cross-functionally with Product, Engineering, and DevOps to translate operational needs into shippable tooling.

CORE COMPETENCIES

- HR Operations & Employee Lifecycle
- AI-Enabled Workflow Design (Pilot → Scale)
- Workflow Automation & Approval Routing
- Compliance, Audit Trails & Risk Guardrails
- Operational Reporting, Queue Health & Dashboards
- Cross-Functional Delivery (Product, Engineering, DevOps)
- Sensitive Employee Data Handling
- Stakeholder Communication & Change Management

PROFESSIONAL EXPERIENCE

Babban Gona · Kaduna, Nigeria

Sept 2025 – Present

Analyst, People & Culture · Employee Experience team (promoted Feb 2026 from Trainee Analyst)

- Built and shipped **TalentLens**, a multi-tenant recruitment assessment platform that introduced structured psychometric and behavioural screening to the organization for the first time, delivering HEXACO personality, Personal Reaction Blank (PRB) behavioural risk, and role-specific MCQ assessments. Engineered cycle-scoped data isolation via Postgres Row-Level Security, MFA-protected admin access (AAL2), a pre-registration assignment queue with trigger-based reconciliation, server-side rubric scoring with composite Honesty-Humility × PRB auto-flag rules, and an append-only audit trail of every privileged action. *First-week production metrics*: 135 candidates uploaded, 95 registered and matched, 262 assignments, 174 submissions (66.4% completion rate), 10 candidates auto-flagged for review.
- Built and shipped **HRsist**, a structured AI behavioural interview platform that displays questions on-screen as the AI agent speaks, captures responses via controlled click-to-speak input, processes them through a speech-to-text pipeline, and routes verbatim transcripts to a recruiter review dashboard. Architected the low-latency WebRTC voice pipeline (LiveKit + OpenAI Realtime API), in-browser proctoring via Google MediaPipe, rubric-based post-interview scoring with evidence excerpts, and an AI escalation ladder (silent log → warning → session termination) to defend against prompt injection and out-of-scope manipulation.
- Designed and validated an AI-driven training video pipeline with a PIN-gated intake interface for multi-scene lessons, automated workflow triggering, status tracking, and email delivery. Optimized the workflow for higher video quality and reduced generation time. Delivered 30+ videos during pilot with a 100% success rate.

- Built an internal HR knowledge chatbot by integrating Chatbase into Cliq via API and a custom Cliq bot, giving employees fast, accurate answers to HR policy questions inside the tool they already use — selecting the right SaaS tool rather than over-engineering a bespoke retrieval system.
- Partnered cross-functionally on platform deployments with the in-house design team for branding fit and with DevOps to deploy onto organizational infrastructure within production timelines.

Babban Gona · Kaduna, Nigeria

Jan 2025 – Aug 2025

Trainee Analyst, Human Resources · Compensation & Benefits team

- Led the design and delivery of **Excelerate**, a secure organization-wide assessment platform for internal testing and performance appraisals. Deployed across two major appraisal cycles in 2025 and 2026, securely assessing 450+ staff members in total, with 200+ concurrent users supported during peak testing windows and zero system failures. Features include randomized test generation, anti-cheat monitoring, server-side grading, role-based access controls, and a Learning & Development module for course authoring and learner progress tracking.
- Engineered an automated **staff replacement approval workflow** using Google Apps Script and structured spreadsheet routing, replacing fragmented email chains. Integrated an asset-reconciliation tracker — a managed column where managers confirm returned equipment before the system advances the request toward HR clearance. Processed 480+ requests to date with zero operational errors, enforcing timestamping and consistent stakeholder inclusion across managers, analysts, and HR.

Babban Gona · Kaduna, Nigeria

Oct 2024 – Jan 2025

Inventory Control Officer · Internal Audit team

- Audited multiple operational units during the 2024 harvest cycle for adherence to company processes and policies; identified control gaps and recommended corrective actions.
- Produced audit reports, tracked remediation across teams, and supported organization-wide risk-reduction initiatives. Internally recruited into Human Resources within three months on the basis of performance.

EDUCATION
